- Exposure: Part Sun to Shade
- Soil: Well Drained
- Water: Regular
- Production Timing: 72 liner - 1gallon 4-6 mos.
- Liners Size: 72
- Available: Fall 2008

'Black Beard' is a breakthrough new selection from Rainbow's End nursery in Cornwall England. This new variety has exceptionally long leaves up to 18" and much better vigor compared to the traditional nigrescens forms. Black Beard is a much faster growing variety that equated to much reduced crop times for growers. Use Black Beard as a great container component, or as a distinct ground cover for shady areas of the garden. Black Beard looks great planted under trees, such as Japanese Maples.
